Asset Science recognised for excellence in data erasure
Receives ADISA certification, proving the effectiveness of their content clearing solution

Montreal, Canada: Asset Science announced today that its data erasure solution has been certified by the Asset Disposal & Information Security Alliance (ADISA) organisation, based in the UK. Widely considered to be the highest standard of data erasure for solid-state circuitry (SSC) as used in today's mobile devices , ADISA confirmed that Asset Science's solution effectively renders data irretrievable. Following extensive testing, ADISA certified that "Asset Science software…will overwrite all available user data" for both Android and iOS devices.

Data erasure (also known as data clearing or data wiping) is a software-based method of overwriting electronic data in order to prevent access to that information. With the introduction of GDPR in Europe and increased focus on data security worldwide, clients require the reassurance of working with a reputable supplier of data erasure.

Asset Science offers both data erasure and diagnostic solutions for all points within the mobile device lifecycle. This omni-channel approach enables clients ranging from post-warranty insurance repair, to carriers, to resellers to maximize the value of devices and reduce logistic costs. www.assetscience.com
