

ERA dispute with BAN has been settled.

ERA would like to continue to speak about our reuse efforts and the fact that we donated 500 computers and laptops in the past few months alone. Helping numerous charities and non profits. We also donated to a charity in Seattle as we begin our expansion into the states.

We collect perfect good computers and laptops and reuse them. We change lives. We help people access technology they can't afford. World wide! Computers are not the typical waste to me treated as a commodity like plastic or steel. Computers and technology are tools that need to be repaired, reused, harvested for parts, and treated as such by tech nerds aka professionals.

Much of the technology we discard in Canada and USA would be on the wish lists of billions with a B people world wide. Iphone 5's , i5 laptops, 17' LCD monitors, technology we won't even look at in the west....

We've been around for 15 years doing this. We have ISO 9000/140001 working towards 270001 and others. We have hard drive shredders, trucks, team of 40 technicians and a staff of almost 100.
