Company:  
USA Gypsum  
(Reinholds, Pennsylvania)  
www.usagypsum.com

Product:  
**Granular Gypsum  
soil treatment**

Recycled Content:  
100-percent recycled gypsum from  
recovered drywall

Target Market:  
Commercial, residential and industrial agricultural consumers

Granular Gypsum, like all of USA Gypsum's products, is made from recycled drywall and used for various agricultural benefits. Gypsum loosens hard soils, provides calcium and sulfur – two key plant nutrients – and, due to its pH of 6.8, offsets damage from road-salt and certain animal deposits (i.e., urine). Additionally, the company says that its product can be used to help alleviate composting odors by retaining nitrogen as ammonium sulfate, instead of being released as ammonia.

Available for public consumption in 40-pound super sacks, as well as in bulk, the non-toxic product can be applied with any type of fertilizer spreader.

Company:  
Alen Corp.  
(Austin, Texas)  
www.alencorp.com

Product:  
**The Airnamic Green MERV 8 air filter**

Recycled Content:  
100-percent recycled PET

Target Market:  
Commercial and residential

The Alen Airnamic Green air filter is made from recycled PET and can be utilized in commercial and residential air filtration systems. Known as "the earth-friendly home filter," the Airnamic Green MERV 8 is moisture-resistant, being made from plastic, and can handle dust, large particles, mold spores, pet dander, pollen and smoke. According to the company, though the filter does have slightly more airflow resistance than a typical electrostatically-charged pleated filter, it still offers commercial-grade filtration.

Product:  
**SmartyKat CozyClamshell cat bed**

Recycled Content:  
EcoRest bedding is 100-percent recycled PET

Target Market:  
Consumer market

The SmartyKat CozyClamshell cat bed is one of many pet-bedding products (don't forget the PoochPlanet line!) offered by Worldwise, Inc., all of which are filled with the company's proprietary EcoRest fiber fill blend, made from 100-percent recycled PET. According to the company, the EcoRest filling used for one CozyClamshell is the equivalent of 13 one-liter PET bottles, as the recovered material is transformed into a "pearl of a bed that features an imposing, scalloped back wall as an opulent backdrop for a soundly sleeping kitty."

Our complete line of tire shredding products and solutions is specifically designed to meet all your needs – from pre-shredding oversized tires to classifying consistently sized chips.

To join the circle of success, call the recognized leader for highest production, best chip quality and lowest operating costs.
