

# Recycled Products

## Company:

Paloma Pottery  
(Ferndale, Washington)  
palomapottery.com

## Product:

Recycled glass mosaic table top

## Recycled Content:

100-percent recycled glass and pottery

## Target Market:

General consumers

Paloma Pottery strives to create a balance between functional art and organic beauty. All pieces in the company's "home" line of products both serve to enhance customer's environment, while being mindful of the environment.

The company makes each piece by hand, using discarded jars, beer and wine bottles, as well as found and discarded glass. The glass is then crushed and fused into the pottery pieces. After firing, the crushed glass surface created is smooth to the touch and reflects both the pottery and the glaze, delivering a rich and memorable piece.

Broken pieces are re-used in mosaics by the company, creating one-of-a-kind pieces. The company also works directly with customers, designing custom pieces for corporate gifts, party favors, customized wedding gifts and more. It also offers a variety of recycled glass products in custom shapes and colors. Paloma Pottery is available in stores across the U.S., including Whole Foods Markets.

## Company:

Roll-Tech Molding Products  
(Hickory, North Carolina)

## Product:

Wheels

## Target market:

Makers of residential waste and recycling collection containers

## Recycled content:

100-percent post-consumer recycled plastic and rubber

Roll-Tech Molding Products makes wheels designed for residential waste and recycling collection containers. The containers are made from post-consumer recycled materials and are also completely recyclable. The wheels – which are available either as snap-lock on the axle or through-hole styles – are specifically designed to be durable in both cold and warm climates. The patent-pending design absorbs impact and shock, while reducing noise.

The wheels can handle loads of up to 300 pounds and range from 12 inches by 2 inches to 10 inches to 2 inches.

The company uses recycled crumb rubber from car and truck tires and plastics to make its products.

**Company:**  
EcoScraps  
(Provo, Utah)  
[www.ecoscraps.com](http://www.ecoscraps.com)

**Product:**  
**Compost**

**Recycled content:**  
100 percent pre-consumer food scraps taken from grocery stores

**Target market:**  
General consumer

EcoScraps is an organic lawn and garden products manufacturer that was established in 2010. The company processes food scraps into nutrient-rich products that help plants grow healthier in an environmentally-friendly way.

The company makes an all-purpose compost mix, made from composted fruits and vegetable matter. This multi-purpose soil amendment can be used when planting trees and shrubs, in landscape and flower beds, in fruit and vegetable gardens, or any time high-organic-matter sources are needed.

The company also makes compost for indoor or outdoor potted plants. EcoScraps Potting Mix has unique features that help regulate moisture levels within the mix and help prevent over and under-watering. It is a unique blend of our nutrient-rich fruit and vegetable compost, 78 bio-available minerals, coco coir and perlite.
