

FOR IMMEDIATE RELEASE

New Recycling Facility in Kilgore, Texas, Boosts Local Sustainability and Waste Reduction

Kilgore, TX – [February 4, 2025] – **Northeast Texas Regional MRF (NETX)** is excited to announce the grand opening of its new **50,000-square-foot Materials Recovery Facility (MRF)** in Kilgore, Texas. This new facility is designed to process both residential and commercial single-stream recyclables, as well as commercial cardboard, making recycling more accessible and efficient for the local community. By improving recycling capabilities, NETX is taking a significant step toward reducing landfill waste and promoting sustainability in the region.

The facility features cutting-edge mechanical sorting technology that can efficiently process a wide range of materials, including paper, plastics, aluminum, and cardboard. With its **single-stream recycling system**, residents and businesses can place all recyclables into a single bin, simplifying the process and encouraging greater participation in recycling efforts.

“We are thrilled to open this new facility in Kilgore, which will not only help reduce environmental impact but also support the local economy,” said Todd Lucas, General Manager of NETX. “With over **30 years of experience** in single-stream recycling, we’re well-equipped to handle growing volumes and continue driving sustainability in Northeast Texas.” The facility will hold an open house this spring for the public to tour and learn more.

Key Features of the New MRF:

- **50,000 square feet of enclosed, efficient processing space**, ensuring clean and safe operations.
- **Advanced sorting technology** to maximize recycling efficiency and minimize contamination.
- **Capability to process both residential and commercial recyclables**, including commercial cardboard.
- **Certified scales** for accurate tracking and reporting.
- **Support for municipal solid waste departments and waste haulers** to streamline local recycling operations.
- **Commitment to sustainability** by diverting thousands of tons of recyclables from landfills each year.
- **Job creation** to support local employment and economic growth.

This new facility is expected to create local jobs, improve regional recycling efforts, and make a significant positive environmental impact on the community.
