

## **Meese opens 5<sup>th</sup> US plant in Florida**

August 13, 2018

**Madison, IN** – Meese (formerly MODRoto), opened a new plant in Jacksonville, Florida in June of this year. This 50,000 square foot plant is the fifth US plant for Meese and is located conveniently and strategically between I-95 and I-10. “The addition of the Jacksonville plant means we can reduce shipping costs for our Southeast customers while staying better connected to all of our customers throughout the US,” says Dan Rodriguez, National Sales Manager. Meese also launched their new website at [www.meese-inc.com](http://www.meese-inc.com) in July and will soon add e-commerce capabilities.

The company’s name change to Meese, made effective on May 7, 2018 is a “nod to our company’s heritage and is just the beginning in our company’s plan for future growth,” says J.R. Ryan, the President of Meese.

Founded in 1931, Meese was the first rotomolder in North America to invest in fully automated rotational molding systems, adding two “Leonardo” machines in 2008. These rotomolding machines produce parts more efficiently with less waste, combined with the ability to control extremely tight tolerances, thereby producing more consistent parts than traditional rotomolding machines.

Meese’s line of quality Poly-Trux, Bulk-Trux, Shelf-Trux, Utility-Trux and Tilt-Trux are built to serve specific hauling, transportation and storage needs of customers in a variety of industries such as laundry, recycling, and materials handling. Their newest line of innovative products include the Linen Locker, created for secure and safe indoor/outdoor collection of bulk items, as well as FDA-approved X-Ray metal detectable containers for safer use in the food manufacturing industry along with the “Pool Shot” line of recreational products.

Additionally, Meese has certification for both EPA and CARB fuel tanks and their in-house award winning Engineering and Design team can create custom designed products to accommodate any need.

### **About Meese**

Meese is a member of the Tingue family of companies. As a Tingue family company, Meese draws from the company’s more than 115 years of global manufacturing experience accumulated since the founding of Tingue, Brown & Co. in 1902.
