# Disruption of the IT Asset Disposition Market Demonstrates the Value of Service

*Tri-Star Recycling provides comprehensive, certified ITAD services with professionalism*

NASHVILLE, Tenn. – In the aftermath of the announced closure of one of the largest U.S.-based IT Asset Disposition providers, there is a renewed focus on value of service.

Arrow Electronics just announced that it has initiated actions to close its personal computer and mobility asset disposition business. Arrow had 10% penetration of the U.S. enterprise market with just four companies ahead of it, primarily major OEMs.

“In the scramble to offer services to the companies negatively impacted by the announcement, many ITAD providers are touting their size”, said Clarence Hollins, CEO of Tri-Star Recycling (TSR). “The lesson to be learned by Arrow’s closure is that size alone does not guarantee a valuable, long-term partnership.”

TSR maintains the highest standard of ethics to responsibly recycle surplus electronics and other retired assets and takes full accountability for our services as stewards of the environment and sensitive client data.

“By approaching our clients with curiosity, respect and a servant’s heart, we’ve helped them identify risks and implement best-practices that have saved their reputation and bottom line”, Hollins added.

TSR’s portfolio spans a variety of industries, such as technology firms, universities, hospitals, construction companies, auto manufacturing plants, government entities and more.
