

# 2021 RECYCLING AND COMPOST EQUIPMENT BUYERS' GUIDE

## *Primed to Thrive*

The last year-plus has one been marked by adjustment and adaptation in all business sectors, and recycling processing has certainly been no exception. Facility operators have juggled social distancing requirements with incoming-stream shifts, market fluctuations and more. But through it all, material has moved and quality bales have been successfully sent to hungry buyers.

Now that the country is emerging from the pandemic, recycling companies are likely

looking to take their retooled teams and enter a phase of growth. One of the best ways to do so is by leveraging the technology and equipment offered by businesses that themselves have evolved in recent months.

The companies listed in our annual Buyers' Guide are well-acquainted with the needs and challenges of operators of all sizes. Explore these listings to find the vendors best aligned with your operation and reach out to these experts for more information.

Certainly, the COVID-19 pandemic has brought plenty of uncertainty to the business of recycling. But it's also given the industry an opportunity to refocus on core operational efficiencies, and the entire experience served as a reminder of the essential role materials recovery plays in the wider society.

As we collectively move into a reshaped world, the time is right to push recycling to new heights. Best-in-class equipment is central to such aspirations. ■

**ACCENT WIRE TIE**

Tomball, Texas

706-975-5920

sschug@accentwire.com

accentwiretie.com

*Accent Wire Tie is the leading provider of baling wire and bale packaging equipment to the recycling and waste industry. Accent has a worldwide baling wire distribution network and the most experienced sales and baling equipment service team to support waste and recycling facilities.*

## Polymer Recovery Systems, Inc.

### Float/Sink Tank

For continuous separation of buoyant plastics from non-buoyant plastics. Suitable for non-plastic material as well. Unique "Z-Flow" material flow pattern allows for 25 feet of surface travel – this allows longer material residence times and superior separation in a compact unit.

Powered by variable speed motors to allow precise control of material flow

Optional equipment includes:

- Discharge water collection/recirculation tanks
- Discharge water screening/filtration systems
- Water spray bars for light to moderate cleaning ability
- Post-separation dryers (centrifugal or rotary)
- Pre-separation air classification

Polymer Recovery Systems, Inc.
