

Mumford Industries Inc. Expands Services With Carbon Friendly Film Products

March 1, 2021

Mumford Industries Inc., a postindustrial plastics recycler and reprocessor, has expanded their range of services to include the production of Retrieve® film for industrial and commercial use. Retrieve® film products are made from 100% recovered, reclaimed film and can be used for any number of applications.

The ultra-heavy duty 3.5 mil customizable size bags can be used for remediation, lawn and garden materials, compost, construction debris, general waste and sustainable packaging.

Retrieve® plastic divider / slip sheets are currently being used as product production management in the rubber industry. These sheets are also customizable and have the added option of being shipped in returnable totes.

“We know that companies are looking for ways to be more carbon friendly and since our product is a reuse/ remanufacture of never used - clean scrap, the environmental impact is minimal, and we want to pass this GHG savings along to others. The options for the bag and the film divider sheets are endless.” Tina Green Huskey VP Business Development

Mumford Industries Inc. is located in Ninety Six, SC and has been helping companies be sustainable since 1995.
