

**Borealis Borcycle™ Technology Provides Value-Added Solutions with Enhanced Sustainability**

*Ready-made grades combine virgin polypropylene with high-quality reclaimed materials.*

**Taylorsville, N.C.** – Borealis, a leading supplier of innovative polyolefin plastic materials for engineering applications in the automotive industry, announces the availability of Borcycle™, its innovative polyolefin-based solution composed of both virgin and post-consumer recyclate (PCR) for the North American automotive market. The Borcycle™ family of products have been conceived for interior, exterior and under-the-bonnet automotive applications and incorporate post-consumer recycled (PCR) content for a lower environmental impact.

Originally developed by Borealis in Europe, ready-made PCR Borcycle™ grades combine virgin polypropylene with high-quality reclaimed materials. They are safe to use and provide a material performance and cost-efficiency equal to the performance and cost-efficiency of virgin materials.

Products in the Borcycle™ family are backed by a reliable supply chain and quality standards. Borealis has conquered the challenges associated with sourcing and processing recycled content. As a result, automotive customers and partners can rely on a steady supply of resource-efficient Borcycle™ grades with consistent high quality.
